

APP DESIGNED TO HELP
IBM EMPLOYEES
PREPARE FOR VARIOUS
CERTIFICATIONS

Pavel Semenov

The problem

- Certifications - what are they? Examples?
- Are they actually needed?
- What is the usual preparation process?

Aims

- Provide an environment where IBM employees can easily access preparatory tests
- Gather up all the information concerning the specific certification in one place
- Develop a cross platform production-ready app
- Create a user-friendly UI design

The solution

- Java Spring Boot + MongoDB protected by Basic Authentication as the backend (API provider)
- React Native as the frontend (API consumer)

Thanks for your attention!
